

Railway Ticket Generation

Using C Programming

❖ Description:

- Our project is based on ticket generation. We have done a coding in DOSBOX for the generation of ticket.
- We have used all types of function in C++ programming.
- When you screen the output, we have to enter pnr no., amount, age, train no., name of 2 stations, ticket no., reaching & name of passenger.
- The output will be seen when you run the program in C++.

❖ Code:

```
#include<stdio.h>
#include<conio.h>

struct railway {
    int PNRNo, TNo, TicNo, Amount, CoNo, Age;
    char Fstation[15], TStation[15], PName[30];
};

void main() {
    int i, p;
    struct railway r[5];
    clrscr();

    for(i = 0; i < 5; i++) {
        printf("\nEnter PNR NO: ");
        scanf("%d", &r[i].PNRNo);

        printf("\nEnter Train No: ");
        scanf("%d", &r[i].TNo);

        printf("\nEnter Ticket No: ");
        scanf("%d", &r[i].TicNo);

        printf("\nEnter Amount: ");
        scanf("%d", &r[i].Amount);

        printf("\nEnter Coach No: ");
        scanf("%d", &r[i].CoNo);

        printf("\nEnter Age: ");
        scanf("%d", &r[i].Age);

        printf("\nEnter From Station: ");
        scanf("%s", r[i].Fstation);

        printf("\nEnter To Station: ");
        scanf("%s", r[i].TStation);

        printf("\nEnter Passenger Name: ");
        scanf("%s", r[i].PName);
    }

    for(i = 0; i < 5; i++) {
        printf("\n\nHappy Journey");
        printf("\nPNR No: %d", r[i].PNRNo);
        printf("\nFrom Station: %s", r[i].Fstation);
        printf("\nTo Station: %s", r[i].TStation);
        printf("\nTrain No: %d", r[i].TNo);
        printf("\nTicket No: %d", r[i].TicNo);
        printf("\nPassenger Name: %s", r[i].PName);
        printf("\nAge: %d", r[i].Age);
        printf("\nAmount: %d", r[i].Amount);
        printf("\nDeparture Time:");
        printf("\nCoach No: %d", r[i].CoNo);
    }

    printf("\n\nEnter PNR no to search ticket: ");
    scanf("%d", &p);

    for(i = 0; i < 5; i++) {
        if(r[i].PNRNo == p) {
            printf("\n\nHappy Journey");
            printf("\nPNR No: %d", r[i].PNRNo);
            printf("\nFrom Station: %s", r[i].Fstation);
            printf("\nTo Station: %s", r[i].TStation);
            printf("\nTrain No: %d", r[i].TNo);
            printf("\nTicket No: %d", r[i].TicNo);
            printf("\nPassenger Name: %s",
                r[i].PName);
            printf("\nAge: %d", r[i].Age);
```

```

        printf("\nAmount: %d", r[i].Amount);
        printf("\nDeparture Time:");
        printf("\nCoach No: %d", r[i].CoNo);
    }
}

    getch();
}

```

❖ Output:

Enter PNR NO:7654
 Enter Train No: 4569
 Enter TicNo: 4683
 Enter Amount: 700
 Enter CoNo:1
 Enter Age: 16
 Enter Fstation: Thane
 Enter TStation: Mumbai
 Enter PName: Hardik
 Enter PNR NO: 7655
 Enter Train No: 4569
 Enter TicNo: 4684
 Enter Amount: 700
 Enter CoNo:3
 Enter Age:34
 Enter Fstation: Thane
 Enter TStation: Mumbai
 Enter PName: Prerna
 Enter PNR NO: 7656
 Enter Train No: 4570
 Enter TicNo:1
 Enter Amount: 300
 Enter CoNo:2
 Enter Age: 22
 Enter Fstation: Thane
 Enter TStation: Nashik
 Enter PName: Vrushali
 Enter PNR NO 7657

Enter Train No 4570
 Enter TicNo. 2
 Enter Amount:300
 Enter CoNo: 2
 Enter Age: 23
 Enter Fstation: Thane
 Enter TStation: Nashik
 Enter PName: Pratik
 Enter PNR NO: 7658
 Enter Train No: 123
 Enter TicNo:3
 Enter Amount: 500
 Enter CoNo: 4
 Enter Age: 23
 Enter Fstation: Thane
 Enter TStation: Pune
 Enter PName: Hrithik

 Happy Journey
