

C++ PROGRAMING

REPORT ON

MEDICAL BILLING SYSTEM

1. Rationales:

- To generate a program for medical billing system using C++.The essential details are selected and taken as attributes for the same.

2. Aims of the Project:

- This project is beneficial as it can store and maintain the data's related to medical billing system.
- To develop a program to demonstrate a Medical Billing System using C++.

3. Benefits of the Project:

- Data is hidden and cannot be access by external function.
- New data and function can be easily added whenever required.

4. Course Outcomes Addressed:

- Develop C++ programs to solve problems using Procedure Oriented Approach.
- Develop C++ programs using classes and objects.
- Implement Inheritance in CH program.
- Use polymorphism in C++ program.
- Develop C++ programs to perform file operations.

5. Literature Review:

- The project is based on developing a program for accepting and displaying the basic and essential data related to medical billing system such as Customer name, Doctor name, List of medicines, Amount, Store name and store id.

6. Actual Methodology Followed:

- Collected 5 samples (medical bills) for referential purpose.
- Made algorithms and flowcharts for accepting and displaying the data's.
- Implemented the program.

```
#include<iostream.h>
```

```
char medical_name[20];
```

```
#include<conio.h>
```

```
long medical_id;
```

```
class MedicalBill {
```

```
public:
```

```
int bill_no;
```

```
void acceptm() {
```

```
float amount;
```

```
cout << "\n\nEnter medical bill details:";
```

```

    cout << "\nEnter Bill no:";
    cin >> bill_no;

    cout << "\nEnter Medical name:";
    cin >> medical_name;
    cout << "\nEnter Medical id:";
    cin >> medical_id;
}

void displaym() {
    cout << "\n\nMedical Bill details are:";
    cout << "\nBill no:" << bill_no;
    cout << "\nMedical name:" <<
medical_name;
    cout << "\nMedical id:" << medical_id;
}
};

class Customer {
    int c_id;
    char c_name[20];
    int c_age;
    char c_gender[10];

public:
    void acceptc() {
        cout << "\n\nEnter Customer Details:";
        cout << "\nEnter Customer id:";
        cin >> c_id;
        cout << "\nEnter Customer name:";
        cin >> c_name;
        cout << "\nEnter Customer age:";
        cin >> c_age;
        cout << "\nEnter Customer gender:";
        cin >> c_gender;
    }
};

void displayc() {
    cout << "\n\nCustomer details are:";
    cout << "\nCustomer id:" << c_id;
    cout << "\nCustomer name:" << c_name;
    cout << "\nCustomer age:" << c_age;
    cout << "\nCustomer gender:" << c_gender;
}
};

class Doctor {
    char d_name[20];

public:
    void accept() {
        cout << "\n\nEnter doctor details:";
        cout << "\nEnter doctor name:";
        cin >> d_name;
    }

    void display() {
        cout << "\n\nDoctor details are:";
        cout << "\nDoctor name:" << d_name;
    }
};

class Medicine {
    int medicine_id;
    char medicine_name[20];
    float cost;

public:
    void acceptmed() {

```

```

cout << "\n\nEnter Medicine Details: ";

cout << "\n\nEnter Medicine ID: ";

cin >> medicine_id;

cout << "\n\nEnter Medicine Name: ";

cin >> medicine_name;

cout << "\n\nEnter Cost of the Medicine: ";

cin >> cost;

}

void displaymed() {

    cout << "\n\nMedicine Details are: ";

    cout << "\nMedicine ID: " << medicine_id;

    cout << "\nMedicine Name: " <<

medicine_name;

    cout << "\nCost of the Medicine: " << cost;

}

};

void main() {

    MedicalBill M;

    Customer C;

    Doctor D;

    Medicine m;

    clrscr();

    M.acceptm();

    M.displaym();

    C.acceptc();

    C.displayc();

    D.accept();

    D.display();

    m.acceptmed();

    m.displaymed();

    getch();

}

```

- Got the desired output.
- Made a report for the same

7. Actual Resources Used:

S. No.	Name of Resource/material	Specifications
1	DOS BOX.	Version 0.7
2	Turbo C++.	Version 3.0

8. Outputs of the Projects:

Enter doctor details:

Enter doctor name: joshi

Doctor details are:

Doctor name: joshi

Enter Medicine Details:

Enter Medicine ID: 2000

Enter Medicine Name: tryspin

Enter Cost of the Medicine: 10

Medicine Details are:

Medicine ID: 2000

Medicine Name: tryspin

Cost of the Medicine: 10

9. Skills Developed / Learning Outcomes of this Project:

- We learnt to work as a group.
- We learnt to develop programs using C++ language.
- By performing this project, we got our concepts more clear.

10. Applications of this Project:

- This program can be used to accept and display the essential details related to medical billing system.
